Denver Federal Center
Mr. Jean Juilland, COAR

Principal Investigator: Shirley M. Davis
Laboratory for Applications of
Remote Sensing
Purdue University
West Lafayette, Indiana 47906

December 1980

Introduction

This report covers activities during the third month of the contract to prepare and deliver Part II of the training course "Remote Sensing for Mineral Specialists" during the week of December 15, 1980.

Significant Steps in the Development

The conclusion of this reporting month was the first day of the course, December 15. During this month instructors were actively preparing their presentations and slides for use during the course. In addition, seven new laboratory exercises were prepared for use during the course. Authors of these exercises were Don Levandowski, David L'Heureux, and Shirley Davis. In addition, Donna Scholz of Technicolor Graphics, Inc., designed five hands-on exercises using the IDIMS. The glossary of image-processing terms was also completed during this period.

All notebooks and completed instructional materials were mailed twelve days before the course via UPS. The notebooks were assembled in Denver the evening before the course began for Monday and Tuesday's lectures and laboratories.

No serious problems were encountered during this month.
